

1. **1.2 Antenatal Testing**

   High pressure air escaping out of tire: Symbolizes the urgency and importance of antenatal testing for certain conditions during pregnancy.
2. **Student driver eating candy:** Represents the need for vigilance and attention to prenatal care, especially for candidates who require antenatal testing.
3. **Driving instructor crammed in the back seat:** Symbolizes the guidance and supervision needed in ensuring proper antenatal care for pregnant individuals.
4. **Tardy slip on car:** Indicates the importance of timely initiation of antenatal testing for pregnant individuals at risk of certain complications.
5. **Multiple baguettes in grocery bag:** Represents the variety of conditions and factors that may warrant antenatal testing during pregnancy.
6. **Stop sign:** Serves as a reminder to halt and consider the necessity of antenatal testing for specific pregnancies.
7. **32 racing number on car:** Indicates the recommended timing to start antenatal testing, typically between 32 to 34 weeks of gestational age.
8. **Girl with 10 helmet giving a peace sign while waiting on her motorcycle with a kickstand:** Represents the fetal kick count protocol, where expecting mothers monitor fetal movements, aiming for 10 movements within a 2-hour period.
9. **“No Stress” bumper sticker:** Symbolizes the non-stress test (NST), a prenatal screening method that assesses fetal heart rate (FHR) for 20 minutes to determine fetal well-being.

10. **2 accelerating blasts coming from “No Stress” car + 20min hubcap + “REACTIV” license plate:** Indicates a reactive NST, where two FHR accelerations are observe c -minute period, signaling a healthy fetal response.
11. **Car with no accelerating blasts + 40min hubcap:** Represents a non-reactive NST, where fewer than two FHR accelerations are observed within a 40minute period, indicating further evaluation may be necessary.
12. **Vibrating headphones on driver:** Symbolizes vibroacoustic stimulation, a technique used during NST if fetal movements are insufficient to stimulate accelerations.
13. **“Contract Brakes!” sign:** Represents the contraction stress test (CST), a prenatal test that assesses fetal heart rate response to uterine contractions, aiming to identify fetal distress.
14. **Stressed out driver**: Symbolizes the purpose of the CST, which is to evaluate fetal response to stressors such as contractions.
15. **“Late decel 50%” score sheet in “+” marked car:** Indicates the interpretation of CST results, with a positive result indicating late decelerations in at least 50% of contractions.
16. **“No Stress” car taking Backward Parallel Parking test with instructor on a bullhorn:** Represents the biophysical profile (BPP), which combines NST with ultrasound criteria to assess fetal well-being.
17. **“No Stress” bumper sticker:** Indicates the inclusion of NST as part of the BPP.
18. **Movement lines on instructor holding the bullhorn + 30min hubcaps:** Symbolizes the fetal movement component of the BPP, where at least three body or limb movements are expected within a 30-minute period.
19. **Tone button underneath walk/stop sign:** Represents the fetal tone component of the BPP, where at least one extension/flexion of a limb or hand opening/closing is expected within 30 minutes.
20. **Student breathing heavily in the test car:** Symbolizes the fetal breathing component of the BPP, where a 30-second stretch of fetal breathing should be observed within 30 minutes.
21. **2cm ruler sticking out of a puddle of water:** Represents the deepest vertical pocket (DVP) of amniotic fluid, a component of the BPP where a measurement of at least 2 cm is considered normal.
22. **8-10 Good! on backward parallel parking test:** Indicates a favorable BPP score of 8 to 10 points, reassuring for fetal well-being.
23. **6 - Retest! on backward parallel parking test:** Indicates an equivocal BPP score of 6 points, suggesting the need for a repeat BPP within 24 hours.
24. **“Low fluid → see mgmt” note on backward parallel parking test:** Indicates concerns regarding amniotic fluid levels, prompting further management and evaluation.
25. **0-4 - SEE MANAGEMENT! on backward parallel parking test:** Indicates an abnormal BPP score of 0 to 4 points, requiring intervention, such as delivery.
26. **BPP clipboard in between ruler in puddle and “No Stress!” bumper sticker:** Represents the modified BPP, which includes NST and DVP measurement.
