

1.1 Normal and Abnormal Labour

1. “Prepare for dilation and effacement!” warning:	Indicates the onset of labor, characterized by uterine contractions leading to cervical changes, including dilation (opening of the cervix) and effacement (thinning of the cervix).
2. Sine wave pattern getting closer together on the pressure reading:	Represents the characteristic of "true" labor where contractions become stronger and closer together over time.
3. A message from Cpt. Hicks in irregular Morse code - “False package! Do not open!”:	Symbolizes false labor or Braxton-Hicks contractions, which are irregular and short contractions that do not cause cervical changes.
4. “10” shaped pipe and aperture:	Represents cervical dilation, which is the opening of the internal cervical os from closed to 10 centimeters (fully dilated).
5. Thin, saran-wrap-like cape on space soldier walking through fully opened aperture:	Symbolizes cervical effacement, which is the thinning out of the cervix from 0% (full thickness) to 100% effaced (fully thinned out).
6. “100” battalion badge on space soldier walking through fully opened aperture:	Indicates cervical effacement, similar to the thin, saran-wrap-like cape.
7. Red target lines projected perpendicular and oblique to space pod’s blue	

spine: Represents fetal lie, which is the position of the fetus's spine in relation to
ther's spine, including longitudinal (spines parallel), transverse (spines
dicular), and oblique (spine neither parallel nor perpendicular).

of space pod diving into a circle underneath it: Symbolizes fetal
8. Hea tation, which is the part of the fetus closest to the internal cervical os,

commonly referred to as the "presenting part," with the most common being cephalic (head down) or breech (butt or feet down).

9. Space pod's head facing us with a target orienting it within a circle: Indicates fetal position, which is the position of the fetal head (fetal occiput) in relation to the maternal pelvis, such as occiput anterior (OA) or occiput posterior (OP).

10. Space pod squeezing through a narrow tube, tube is labeled from -3 to +4: Represents fetal station, which is the location of the fetus's head (at biparietal diameter) in relation to the maternal ischial spines, with "0" indicating the head at the ischial spines, "-" if above, and "+" if below.

11. Hologram of space pod approaching increasingly dilated aperture on control panel 1: Symbolizes stage 1 of labor, which encompasses the onset of until full dilation (0 to 10 centimeters) and 100% effacement, consisting of latent and active phases.

12. "0-6 Latent" label on space pod hologram above partially opened aperture: Indicates the latent phase of stage 1 of labor, which ranges from 0 to 6 centimeters dilated and is characterized by slower cervical dilation.

13. "6-10 Active" label on hologram space pod with fully opened aperture: Represents the active phase of stage 1 of labor, ranging from 6 to 10 centimeters dilated and characterized by rapid cervical dilation.

14. "Delivery Complete!" sign next to hologram space pod that's passed through aperture on control panel 2: Symbolizes stage 2 of labor, which ex
from full dilation until the delivery of th

15. Hologram of a disc-shaped Ul **lying off near console 3:** Represents
ery of the baby and extends until the c
placenta.

16. "02:00:00" projection next to the **disc-shaped UFO:** Indicates stage 4 c
hours after the delivery of the placenta. labor,

17. Bacteria lanterns: Symbolizes complications of prolonged labor, such as chorioamnionitis, which can lead to maternal and infant sepsis, postpartum hemorrhage (PPH), and the need for a cesarean section.

18. Red liquid dripping from a crack in the ceiling: Represents complications of prolonged labor, similar to the bacteria lanterns.

19. Scalpel stuck in the ceiling: Symbolizes complications of prolonged labor, similar to the red liquid dripping from a crack in the ceiling.

20. Docking time error underneath Latent hologram: Indicates a prolonged latent phase of the first stage of labor, characterized by more than 20 hours in nulliparous or more than 14 hours in multiparous patients to reach 6 centimeters dilated.

21. Portal dilation error underneath Active hologram: Represents a prolonged active phase of the first stage of labor, characterized by slow dilation of less than 1.2 centimeters per hour in nulliparous or less than 1.5 centimeters per hour in multiparous patients from 6 to 10 centimeters dilated.

22. Warning! Arrest of Dilation! on console 1: Indicates an arrest of dilation during the active phase of the first stage of labor, characterized by no cervical change over 4 hours with rupture of membranes (ROM) and adequate contractions or over 6 hours with ROM and inadequate contractions.

23. “ROM + Cont 04:00”: Represents an arrest of dilation during the active phase of the first stage of labor, similar to the warning message.

24. “ROM - Cont 06:00”: Indicates an arrest of dilation during the active phase of the first stage of labor, similar to the warning message.

25. Astronaut on console 1 with an ox on his back: Symbolizes the general management of abnormal first stage of labor, which may involve the administration of Pitocin (oxytocin) and rupture of membranes.

26. Astronaut on console one rupturing the cover over the emergency button: Represents the general management of abnormal first stage of labor, similar to the astronaut with an ox on his back.

27. Scalpel in console 1 underneath Warning! Arrest of Dilation!: Indicates the need for a cesarean section if there is an arrest of labor (no cervical change).

28. Warning! Arrest of Descent on console 2: Indicates an arrest of descent during the second stage of labor, characterized by no descent of the fetus after more than 3 hours of pushing in nulliparous or more than 2 hours of pushing in multiparous patients.

29. Cargo pod malpresentation on console 2: Represents causes of arrest of descent, such as cephalopelvic disproportion, maternal exhaustion, or poor pushing.

30. Low power warning on console 2: Indicates causes of arrest of descent, similar to the cargo pod malpresentation.

31. Astronaut vacuuming console 2: Symbolizes the general management of abnormal second stage of labor, which may involve operative vaginal delivery (vacuum/forceps) if the baby is at or beyond +2 station or a cesarean section.

32. Scalpel in console 2: Represents the general management of abnormal second stage of labor, similar to the astronaut vacuuming console 2.

33. Cardinal movements screen: Indicates the cardinal movements of labor, including engagement, descent, flexion, internal rotation, extension, external rotation, and expulsion, which contribute to the birthing process.
