

1.1 Introduction to Obstetrics

1. Beta-glasses teacher + yellow flower
→ placenta → β -hCG → corpus luteum → progesterone
2. Beta-glasses teacher + tests with blood and pee
→ β -hCG (urine is qualitative, blood is quantitative)
pregnancy test measures urine or blood
3. 10 + normal curve + 2/48 + bloody test
→ quantitative pregnancy test = if normal,
 β -hCG should double every 48h until ~10wks
pregnant
4. TVUS + channel 5 sac
→ transvaginal ultrasound detects gestational sac at 5wk and fetal HR at 6wk
5. TVUS + 6 o'clock heart clock
→ transvaginal ultrasound detects gestational sac at 5wk and fetal HR at 6wk
6. Last period → regular schedule

can use LMP to date a pregnancy if their period is regular, every 28 days, and they

remember it

7. “EDD Naegele”

→ use Naegele’s rule to calc EDD = -3 months, +7 days, +1 year from LMP

8. “-3/+7/+1”

→ use Naegele’s rule to calc EDD = -3 months/+7 days/+1 year from LMP

9. “40meWork due”

→ estimated due date = 40wks

10. Crown + shaking rump + 1st trimester window

→ To get an EDD by ultrasound, measure the crown-rump length in the first trimester

11. Fundus hat + belly button + 20

→ When fundal height reaches the umbilicus, fetal age is ~20 weeks (rough estimate if more accurate dating methods are not available)

12. Pregnant snake on gravel

→ gravidity = # of times pregnant

13. PARAKEET

→ parity = info about outcome of pregnancies (Term/Preterm/Abortion/Living)

14. Teacher’s PAL

→ parity = info about outcome of pregnancies (Term/Preterm/Abortion/Living)

15. 37wk hatching egg

→ T in TPAL → term = born at 37+ wks gestational age

16. 20+ wk hatching egg

→ P in TPAL → pre-term = born b/w 20wk and 36wk6d gestational age

17. Unhatched egg

A in TPAL → abortion = pregnancy loss <20wks gestational age (regardless of cause)

18. Living baby bird

→ L in TPAL → living = # of living children at time of interview

19. 37wk section

→ term pregnancy $\geq 37w0d$ → impt. fetal development = enough surfactant for fetal lungs

20. Underdeveloped plant above purple 24wk section

→ previable pregnancy $\leq 24w0d$ → fetus not developed enough for extra-uterine survival

21. Underdeveloped but surviving plant above red books b/w 24wks and 37wks

→ pre-term pregnancy = 24w0d-36w6d, fetus underdeveloped but survival possible w/ medical interventions

22. Thriving plant above 37wk section

→ term pregnancy $\geq 37w0d$ → impt. fetal development = enough surfactant for fetal lungs

23. Old plant above brown books after 42wks

→ post-term pregnancy $\geq 42wks$, increased risk of intra-uterine fetal demise

24. White bookmark in red pre-term section

→ late pre-term = 34w0d-36w6d

25. Orange bookmark in green term section

→ term pregnancy subdivisions: early term = 37w0d-38w6d, full term = 39w0d-40w6d, late term = 41w0d-41w6d

26. Yellow bookmark in green term section

→ term pregnancy subdivisions: early term = 37w0d-38w6d, full term = 39w0d-40w6d, late term = 41w0d-41w6d

27. Blue bookmark in green term section

→ early term = 37w0d-38w6d, full term = 39w0d-40w6d, late term = 41w0d-41w6d

28

Number line w/ bold 14 and 28

28

pregnancy trimesters: 1st = 0-14wks, 2nd = 14-28wks, 3rd $\geq$ 28wks

29. Number line w/ bold 14 and 28

→ pregnancy trimesters: 1st = 0-14wks, 2nd = 14-28wks, 3rd $\geq$ 28wks

30. Number line w/ bold 14 and 28

→ pregnancy trimesters: 1st = 0-14wks, 2nd = 14-28wks, 3rd $\geq$ 28wks

31. APP Game

→ APGAR score = color, heart rate, reflexes, muscle tone, respiration (each 2pts, perfect 10pts),
scored at 1min and 5 min

32. Rosy cheeks

→ APGAR score = color, heart rate, reflexes, muscle tone, respiration (each 2pts, perfect 10pts),
scored at 1min and 5 min

33. Heart rate monitor

→ APGAR score = color, heart rate, reflexes, muscle tone, respiration (each 2pts, perfect 10pts),
scored at 1min and 5 min

34. Tapping screen

→ APGAR score = color, heart rate, reflexes, muscle tone, respiration (each 2pts, perfect 10pts),
scored at 1min and 5 min

35. Flexed muscles

→ APGAR score = color, heart rate, reflexes, muscle tone, respiration (each 2pts, perfect 10pts),
scored at 1min and 5 min

36. Screaming lines

→ APGAR score = color, heart rate, reflexes, muscle tone, respiration (each 2pts, perfect 10pts),
scored at 1min and 5 min

37. Score 0-10

→ APGAR score = color, heart rate, reflexes, muscle tone, respiration (each 2pts, perfect 10pts),
scored at 1min and 5 min
